

Trippy: Your AI Travel Curator

User Manual & Functional Guide

Welcome to Trippy, a sophisticated AI-led travel advisor designed to transform the way you plan your next adventure. By leveraging advanced generative AI and real-time place data, Trippy acts as your personal travel curator, moving beyond static templates to create dynamic, conversational itineraries tailored to your specific desires.

1. Navigating the Home Dashboard

The primary interface is designed for simplicity and speed. Before launching the AI agent, you must provide the core parameters for your journey.

- **Traveling From:** Enter your departure city. The system uses autocomplete to ensure geographic accuracy.
- **Destination Selection:** You can toggle between searching for a specific **City** or a **Landmark**. This allows for broad exploration (e.g., "Paris") or pinpoint planning (e.g., "Eiffel Tower").

Feature	Functionality
Flexible Dates	Check this box if your schedule is open, allowing the AI to suggest optimal travel windows.
Trip Price Toggle	Switch between 'Total Trip' budget or 'Per Person' cost to align with your financial planning.
Saved Trips	Access previously planned itineraries at the bottom of the screen to resume editing or review details.

2. Engaging the Planning Agent

Once you click **Plan Trip**, you enter the interactive planning environment. This dual-pane interface separates the conversational agent from the visual itinerary.

The Trippy Agent (Left Pane)

The agent will introduce itself and immediately begin generating your first draft. You can communicate with the agent using natural language to refine your plans. Examples of interactions include:

- *"Find the best local hidden gem restaurants that have seafood and add them to Day 2 and Day 4."*
- *"Make the schedule less packed; I want more time for relaxation."*
- *"Suggest activities for an extra day if I decided to stay longer."*

The Interactive Itinerary (Right Pane)

As the agent processes your requests, the itinerary updates in real-time. It provides a chronological breakdown of your trip, including:

- **Morning/Afternoon/Evening Segments:** Logical groupings of activities.
- **Location Details:** Specific neighborhoods and venue names.
- **Contextual Tips:** Expert advice on what makes a specific spot unique (e.g., "This spot is famous for its feijoada, but the Moqueca is an absolute revelation").

3. Advanced Customization & Logic

Trippy is built to handle nuanced preferences. If you ask for a "hidden gem," the agent may ask clarifying questions to better serve your taste:

1. **Vibe Check:** Do you prefer super casual, "hole-in-the-wall" spots, or high-end dining?
2. **Location Depth:** Are you willing to travel to residential neighborhoods or do you prefer staying near the main tourist hubs?
3. **Activity Type:** Should the focus remain on the specific request (e.g., seafood) or can it include related cultural experiences?

4. System Customization

For an optimal viewing experience, Trippy supports a **Dark Mode/Light Mode** toggle located in the top-right corner of the application. This is particularly useful for planning trips in different lighting environments or for personal visual comfort.

Note: To save or delete a trip from your history, use the red 'delete' icon on the trip cards in the 'Saved Trips' section of the home dashboard.
